However, because it contains valuable information, it is also important to have a place to store and back it up. Therefore, I decided to create a customized Recovery CD which makes the data on the CD available via NetworkFS as a read only mount point. To create a recoverable CD you first need to create a very basic ISO file which contains all the files required to boot. I've given it a name ISO\_RecCD\_CE.iso because I intend to use this for CE. As you can see, it contains a SYSLINUX header and the three files needed to mount the data on the CD as a read only mount point. If you open it in the Text Editor, you can see the contents of the SYSLINUX header.
